The human body and the law : legal & ethical considerations in human experimentation. by. Levy, Charlotte L. Central to establishing what constitutes permissible human experimentation are the issues of risk-benefit ratio and informed consent. Evaluating the risk-benefit ratio requires consideration of the nature of the experiment, the likelihood of its success, and the type of subjects to be utilized. Participation in a study requires voluntary "educated" informed consent. Certain categories of subjects, such as children and the mentally handicapped, require special protection in this regard. Finally, formal education in medical ethics and prohibiting publication of unethical studies are li
