Subjects: Health Sciences. The rabbit is a member of the great class of air-breathing, warm-blooded animals known as Mammalia, which class is of special interest to man since he himself belongs to it. Perhaps the most obvious and distinctive of the characteristics of this class are the possession of mammary glands and the possession of true hair. Among the many orders composing the Mammalia, two of the more lowly are distinguished by various features related to gnawing habits, particularly modifications of the teeth for this purpose.
