Coping With Chronic Illness Overcoming Powerlessness.

Chronic illness brings about many changes that can threaten family stability.⁴ As chronically ill parents are forced to face the challenges of their illness, they must simultaneously adapt their family responsibilities.^{3,5} Research exploring the general perspective of parenting with illness is limited, but some studies have evaluated parents afflicted with specific chronic diseases, such as cancer, HIV infection, and multiple sclerosis. Information extrapolated from these reviews indicates that children with a parent who has a chronic illness experience greater psychological and social challenges.¹
