The periodic table of the elements is a gallery of some of science's most intriguing characters, according to this sprightly tome of pop-chemistry. Ball (*H<sub>2</sub>O: A Biography of Water*) traces science's understanding of the building blocks of matter as it evolved from Aristotle's four elements of earth, water, air and fire to our modern assemblage of 109 named elements with associated isotopes, some, such as hydrogen, as old as the stars and others, like an isotope of the unnamed element 111, flitting. Friendly and informative, the book explores the concept of an element from a historical and practical perspective. Instead of expounding on each one, the author singles out the star players.

Philip Ball has a comfortable writing style and explains all the technical details precisely but simply. It also makes me want to go to school in Britain, but that's OK

138 Section 2 ¶ Guide to Structure and Written Expression. Lesson 22. Incomplete noun clauses. Noun clauses are the third type of subordinate clause. They begin with noun-clause markers. Noun clauses that are formed from statements begin with the noun-clause marker that. Noun clauses formed from yes/no questions begin with the noun-clause markers whether or if. In Structure items, the noun-clause marker, along with any other part of the noun clause subject, verb, and so on may be missing from the stem, or the whole noun clause may be missing.
