Asymmetries in Time covers many notoriously difficult problems in the philosophy of science: causation, knowledge, entropy, explanation, time travel, rational choice (including Newcomb's problem), laws of nature, and counterfactual implication—and gives a unified treatment of these matters. The book covers an unusually broad range of topics in a lucid and nontechnical way and includes alternative points of view in the philosophical literature. Established in 1962, the MIT Press is one of the largest and most distinguished university presses in the world and a leading publisher of books and journals at the intersection of science, technology, art, social science, and design. About. Catalogs. Asymmetric information, also known as "information failure," occurs when one party to an economic transaction possesses greater material knowledge than the other party. This typically manifests when the seller of a good or service possesses greater knowledge than the buyer; however, the reverse dynamic is also possible. Almost all economic transactions involve information asymmetries. Special Considerations: Information Asymmetry in Finance. To prevent abuse of customers or clients by finance specialists, financial markets often rely on reputation mechanisms. Financial advisors and fund companies that prove to be the most honest and effective stewards of their clients' assets tend to gain clients, while dishonest or ineffective agents tend to lose clients, face legal damages, or both. T-symmetry or time reversal symmetry is the theoretical symmetry of physical laws under the transformation of time reversal: T-symmetry implies the conservation of entropy. Since the second law of thermodynamics means that entropy increases as time flows toward the future, the macroscopic universe does not in general show symmetry under time reversal. In other words, time is said to be non-symmetric, or asymmetric, except for special equilibrium states when the second law of thermodynamics predicts

These criminogenic 'asymmetries contribute in complex ways to the absence of adequate controls. In some cases there are simply no controls at all' (Passas 1999: 403).^Â At the time of this writing, both Tor marketplaces have since been dismantled and are no longer in operation, but were until recently³ Tor sites that attracted a variety of vendors advertising and selling broad ranges of items (e.g., drugs, software, stolen data, weapons) originating from over fifty countries combined.^Â The Tor Network is accessible only once the free Tor anonymizing software has been downloaded. A series of rendezvous points set up by Tor nodes inside the Tor Network. The thermodynamic time asymmetry is one of the most salient and consequential features of the physical universe. Heat flows from hot to cold, never the reverse. The smell of coffee spreads throughout its available volume, never the reverse.^Â This entry concentrates on two of them. In contemporary parlance, they are each questions about grounding. (1) What grounds the thermodynamic asymmetry in time? In a world possibly governed at bottom by time-symmetric laws, how do the time-asymmetric laws of thermodynamics arise? (2) Does the thermodynamic time asymmetry ground any other temporal asymmetries? Does it account, for instance, for the fact that we know more about the past than the future? The discussion thus divides between thermodynamics being an explanandum or explanans.

PDF | In a recent book, *Asymmetries in Time*, Paul Horwich presents a systematic account of various temporal asymmetries, including a neo-Reichenbachian account of the (apparent) fact that we know more about the past than the future, the epistemological time asymmetry. I find some... A 'read' is counted each time someone views a publication summary (such as the title, abstract, and list of authors), clicks on a figure, or views or downloads the full-text. Learn more. DOI: 10.2307/192713. The time is now. We all know it: internet is a powerful force in democratizing information, reducing the typical gap between the experts and the public. Information is the currency of the internet. The effects are amazing in many industries and sciences. Banks are fostering information asymmetries. In order to accelerate change in investors' culture in Italy, we have adjusted our strategy and decided to approach financial institutions to help them innovate their range of investment services by offering them our technology. Meeting after meeting I soon realized that the asymmetries of information between finance professionals and investors, no matter what level of education, are nothing but a strategic decision of most financial institutions.
